

Appl. No. 09/752,372
Response Dated May 29, 2007
Reply to Office Action of January 26, 2007

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application.

Listing of Claims:

Claims 1-2 (Canceled).

Claim 3 (Previously Presented): A method to manage packet fragmentation, comprising:

determining an operating parameter for a packet, with said operating parameter to represent a priority level;

determining an operating status to be set in accordance with said operating parameter, with said operating status to comprise active or de-active;

performing packet fragmentation substantially in accordance with said operating status; and

evaluating whether said operating parameter has been determined within a limited time period.

Claim 4 (Original): The method of claim 3, wherein said priority level is high and said operating status is active.

Claim 5 (Original): The method of claim 3, wherein said priority level is low and said operating status is de-active.

Appl. No. 09/752,372
Response Dated May 29, 2007
Reply to Office Action of January 26, 2007

Claim 6 (Previously Presented): The method of claim 3, wherein said determining an operating status for said operating parameter, comprises:

determining said operating status substantially in accordance with said evaluation.

Claim 7 (Original): The method of claim 6, wherein said operating parameter is a high priority level, said high priority level was determined within said time period, and said operating status is active.

Claim 8 (Original): The method of claim 6, wherein said operating parameter is a low priority level, said low priority level having been determined within said time period, and said operating status is de-active.

Claim 9 (Canceled)

Claim 10 (Previously Presented): A method to manage packet fragmentation, comprising:

determining an operating parameter for a packet;

determining an operating status to be set in accordance with said operating parameter, with said operating status to comprise active or de-active;

performing packet fragmentation substantially in accordance with said operating status;

evaluating whether said operating parameter has been determined within a limited time period; and

Appl. No. 09/752,372
Response Dated May 29, 2007
Reply to Office Action of January 26, 2007

wherein said determining an operating parameter comprises:

receiving said packet with an operating parameter identifier; and

retrieving said operating parameter identifier from said packet.

Claim 11 (Previously Presented): The method of claim 10, wherein said operating parameter identifier represents a priority level for said packet.

Claim 12 (Previously Presented): The method of claim 11, wherein said operating parameter identifier comprises an operating parameter identifier to comprise a differential services code byte, a real time protocol identifier, a voice over Internet Protocol identifier or a voice information identifier.

Claim 13 (Previously Presented): A method to manage packet fragmentation, comprising:

determining an operating parameter for a packet, wherein said operating parameter comprises an operating parameter identifier to comprise a time, a date or a time and date;

determining an operating status to be set in accordance with said operating parameter, with said operating status to comprise active or de-active;

performing packet fragmentation substantially in accordance with said operating status; and

evaluating whether said operating parameter has been determined within a limited time period.

Claim 14 (Original): The method of claim 13, wherein determining an operating parameter comprises:

searching for said operating parameter; and
retrieving said operating status associated with said retrieved operating parameter.

Claims 15-16 (Canceled)

Claim 17 (Previously Presented): An article comprising:

a storage medium;
said storage medium including stored instructions that, when executed by a processor, result in determining an operating parameter for at least one packet, determining an operating status to be set in accordance with said operating parameter, performing packet fragmentation substantially in accordance with said operating status by setting said operating status to activate packet fragmentation, and wherein said determining said operating status is performed by evaluating whether said operating parameter has been determined within a limited time period.

Claim 18 (Previously Presented): An article comprising:

a storage medium;
said storage medium including stored instructions that, when executed by a processor, result in determining an operating parameter for at least one packet, determining an operating status to be set in accordance with said operating parameter,

Appl. No. 09/752,372
Response Dated May 29, 2007
Reply to Office Action of January 26, 2007

performing packet fragmentation substantially in accordance with said operating status by setting said operating status to deactivate packet fragmentation, and wherein said determining said operating status is performed by evaluating whether said operating parameter has been determined within a limited time period.

Claim 19 (Previously Presented): An article comprising:

a storage medium;
said storage medium including stored instructions that, when executed by a processor, result in determining an operating parameter for at least one packet, determining an operating status to be set in accordance with said operating parameter, performing packet fragmentation substantially in accordance with said operating status, and wherein said determining said operating status is performed by evaluating whether said operating parameter has been determined within a limited time period, and determining said operating status substantially in accordance with said evaluation.

Claims 20-21 (Canceled)

Claim 22 (Previously Presented): A system comprising:

a computer platform to manage packet fragmentation;
said platform to determine an operating parameter for at least one packet, determine an operating status to be set in accordance with said operating parameter, perform packet fragmentation substantially in accordance with said operating status, to determine said operating status by evaluating whether said operating parameter has been

Appl. No. 09/752,372
Response Dated May 29, 2007
Reply to Office Action of January 26, 2007

determined within a limited time period, and to set an operating status to activate packet fragmentation.

Claim 23 (Previously Presented): A system comprising:

a computer platform to manage packet fragmentation;
said platform to determine an operating parameter for at least one packet,
determine an operating status to be set in accordance with said operating parameter,
perform packet fragmentation substantially in accordance with said operating status, to
determine said operating status by evaluating whether said operating parameter has been
determined within a limited time period, and to set an operating status to deactivate
packet fragmentation.

Claim 24 (Previously Presented): A system comprising:

a computer platform to manage packet fragmentation;
said platform to determine an operating parameter for at least one packet,
determine an operating status to be set in accordance with said operating parameter,
perform packet fragmentation substantially in accordance with said operating status, to
determine said operating status by evaluating whether said operating parameter has been
determined within a limited time period, and to determine said operating status
substantially in accordance with said evaluation.

Claims 25-26 (Canceled)

Appl. No. 09/752,372
Response Dated May 29, 2007
Reply to Office Action of January 26, 2007

Claim 27 (Previously Presented): A method to perform packet fragmentation, comprising:

- determining an operating parameter for a packet;
- determining a packet fragment size using said operating parameter;
- performing packet fragmentation for said packet using said packet fragment size, wherein said operating parameter comprises a priority level; and
- evaluating whether said operating parameter has been determined within a limited time period.

Claim 28-30 (Canceled)

Claim 31 (Previously Presented): The method of claim 27, wherein said packet fragment size decreases as said priority level increases.

Claim 32 (Previously Presented): The method of claim 27, wherein said packet fragment size increases as said priority level decreases.

Claim 33 (Previously Presented): The method of claim 27, wherein said determining comprises:

- determining said packet fragment size substantially in accordance with said evaluation.

Appl. No. 09/752,372
Response Dated May 29, 2007
Reply to Office Action of January 26, 2007

Claim 34 (Previously Presented): A method to perform packet fragmentation, comprising:

- determining an operating parameter for a packet;
- determining a packet fragment size using said operating parameter;
- performing packet fragmentation for said packet using said packet fragment size, wherein said at least one operating parameter comprises a connection speed and priority level; and

evaluating whether said operating parameter has been determined within a limited time period.

Claim 35 (Original): The method of claim 34, wherein said packet fragment size increases within a priority level as said connection speed increases.

Claim 36 (Original): The method of claim 34, wherein said packet fragment size decreases within a priority level as said connection speed decreases.

Claim 37 (Previously Presented): The method of claim 34, wherein said determining said packet fragment size comprises:

determining said packet fragment size in accordance with said evaluation.

Claim 38 (Original): The method of claim 37, wherein said operating parameter is a high priority level, said high priority level was determined within said time period, and said operating status is active.

Claim 39 (Original): The method of claim 37, wherein said operating parameter is a low priority level, said low priority level having been determined within said time period, and said operating status is de-active.

Claims 40-45 (Canceled)

Claim 46 (Currently Amended): A method, comprising:
determining an operating parameter for a packet;
determining a packet fragment size using said operating parameter;
performing packet fragmentation for said packet using said packet fragment size,
wherein said operating parameter comprises a priority level; and
wherein said packet fragment size decreases as said priority level increases;
~~The method of claim 45, wherein said determining comprises:~~
evaluating whether said operating parameter has been determined within a limited time ~~period; period,~~ and determining said packet fragment size substantially in accordance with said evaluation.

Claim 47 (Canceled)

Claim 48 (Currently Amended): A method, comprising:
determining an operating parameter for a packet;
determining a packet fragment size using said operating parameter;

Appl. No. 09/752,372
Response Dated May 29, 2007
Reply to Office Action of January 26, 2007

performing packet fragmentation for said packet using said packet fragment size,
wherein said operating parameter comprises a priority level; and
wherein said packet fragment size increases as said priority level decreases;

The method of claim 47, wherein said determining comprises evaluating whether said operating parameter has been determined within a limited time period; and determining said packet fragment size substantially in accordance with said evaluation.
